

The **Court Automation Coordinating Committee (CACC)** is a standing advisory committee of the **Commission on Technology (COT)**. Its purpose is to coordinate planning, enhancements, and implementation of automation in trial courts. Members review projects and their interrelationships on a statewide level to foster increased communication, coordination, and collaboration. CACC also may recommend technical solutions, automation priorities, or allocation of available resources. CACC responds to COT's requests to review aspects of automation plans and grant requests and make recommendations regarding technical standards and approaches. The COT Chair appoints key leaders in various roles from the Arizona court system statewide to serve on CACC.
